PT New polynucleotides encoding c-Jun N-terminal kinase kinase kinases

PT i.e. MLK4, PAK4, associated with skin damage for use in drug screening
PT and development -
XX
PS Claim 1; Page 23; 51pp; English.
XX
CC The present sequence is that of a MLK4 polypeptide, as predicted
CC from an isolated MLK4 partial cDNA (see AAF30487). MLK4 is 1 of 4
CC novel c-Jun N-terminal kinase kinase kinases (JNKKK) of the
CC invention. It has 50-78% identity to members of the MLK family of
CC JNKKKs. MLK4 is expressed in keratinocytes, kidney and pancreas,
CC but not in brain, placenta, lung, liver or skeletal muscle. The
CC transcript size is 4.8 kb. MLK4, PAK4, PAK5 and YSK2 polynucleotides
CC and their gene products are useful for elucidation of the components
CC involved in the cellular response to ultraviolet radiation. They can
CC be used in drug discovery, by screening for compounds that affect the
CC activity of a JNKKK or which affect the expression of a gene encoding
CC a JNKKK. Particularly useful are drugs that reduce UV light-induced
CC damage of the skin, inflammation and psoriasis, and drugs that
CC enhance wound healing.

PT Kinase polypeptides useful for treating cancers, Alzheimer's disease,
PT viral infections, diabetes, obesity, organ transplant rejection and
PT rheumatoid arthritis -
XX
PS Claim 7; Page 217; 218pp; English.
XX
CC The invention provides human protein kinases and protein kinase-like
CC enzymes and polynucleotides encoding the polypeptides. The kinase
CC polypeptides and their modulators are useful for treating a disease or
CC disorder such as cancer, immune-related diseases, cardiovascular disease,
CC brain or neuronal-associated disease and metabolic disorders, including
CC cancers of tissues, cancers of hematopoietic origin, diseases of the
CC central nervous system, diseases of the peripheral nervous system,
CC Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic
CC lateral sclerosis, viral infections, infections caused by prions,
CC bacteria and fungi, ocular diseases, migraines, pain, sexual dysfunction,
CC mood disorders, attention disorders, cognition disorders, hypotension,
CC hypertension, psychotic disorders, neurological disorders, dyskinesias,
CC metabolic disorders, and organ transplant rejection. They are also useful
CC for treating rhinitis, autoimmunity, atherosclerosis, psoriasis,
CC osteoarthritis, asthma, chronic inflammatory pelvic disease, chronic
CC inflammatory bowel disease, rheumatoid arthritis, metabolic disorders
CC such as diabetes, obesity, cardiovascular diseases such as reperfusion
CC injury, coronary thrombosis, clotting disorders and atherosclerosis,
CC ocular diseases such as glaucoma, retinopathy and macular degeneration,
CC psychiatric and neurological disorders such as anxiety, schizophrenia,
CC dementia, manic depression, etc. The polynucleotides are useful in gene
CC therapy techniques to treat the above mentioned disorders. Sequences
CC AAB85491-85522 represent the human protein kinases of the invention.

XX
CC The invention relates to an isolated polypeptide with signal sequences
CC which allow it to be secreted extracellularly or membrane associated.
CC The activity of polypeptides of the invention may be described as,
CC cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic,
CC neuroprotective, immunosuppressive, haemostatic, antiinflammatory,
CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic,
CC and metabolic. Polypeptides and polynucleotides of the invention are
CC useful in the treatment, or as a vaccine in the prevention of, cancer,
CC wound healing disorders, infection, atherosclerosis, Parkinson's disease
CC and Alzheimer's disease, autoimmune disorder, haematopoietic disorder,
CC inflammation, neoplastic diseases, nervous system related disorders and
CC cardiovascular disorders, pancreatitis, respiratory disorder,
CC hyperproliferation, systemic autoimmune disease, hyper-immunity,
CC developmental abnormality, gastrointestinal ulceration, neuropathy,
CC haematological diseases, metabolic diseases, sperm dysfunction, thyroid
CC disorders e.g. hypothyroidism, brain damages, colitis, cone photo-
CC transduction deficiency, neurological diseases, stroke, angiogenesis,
CC ovulation disorders, diseases in the spinal cord, thyroid gland, heart,
CC trachea, thymus, lymph node and muscular system, obesity, anorexia,
CC growth abnormalities, and alleviation of precocious puberty. The
CC sequences given in records ABP60965-ABP61019 represent novel human
CC proteins of the invention.

PT Novel human kinase polynucleotide encoding a protein that shares
PT structural similarity with animal kinases for therapeutic, diagnostic
PT and pharmacogenomic applications -
XX
PS Claim 1; Page 37-39; 41pp; English.
XX
CC The invention relates to a novel human protein (NHP), kinase that shares
CC structural similarity with animal kinases. The kinase polynucleotides are
CC useful in therapeutic, diagnostic and pharmacogenomic applications and
CC for identifying compounds that modulate, i.e. act as agonists or
CC antagonists of the gene expression or gene product activity. The present
CC sequence represents the NHP kinase.

XX
PT   Human kinases and nucleic acids, useful for preventing diagnosing and
PT   treating cancers, inflammation and immune disorders -
XX
PS   Claim 1; Page 134-136; 166pp; English.
XX
CC   The present invention relates to human kinases (PKIN) and the nucleic
CC   acids encoding them. PKIN is used as vaccine and in gene therapy. PKIN is
CC   used in the prevention, diagnosis and treatment of diseases cancers,
CC   adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease,
CC   acquired immune deficiency syndrome (AIDS), anaemia, asthma, allergies,
CC   gout, microbial infections, cardiovascular disease and/or inflammation,
CC   myasthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial
CC   infarction, cataract, growth and development disorder, seizure disorder,
CC   pulmonary embolism, Gaucher's disease, lipid disorder, lipid storage
CC   disease, Pick's disease, Tay-Sachs disease, renal disease and obesity.
CC   PKIN may be used to treat disorders associated with decreased PKIN
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of PKIN by expressing inactive proteins or to
CC   supplement the patients own production of PKIN. PKIN nucleic acids may be
CC   used to produce the PKIN polypeptide, by inserting the nucleic acids into
CC   a host cell and culturing the cell to express the protein. PKIN nucleic
CC   acid and its complementary sequences may also be used as DNA probes in
CC   diagnostic assays to detect and quantitate the presence of similar
CC   nucleic acid sequences in samples and therefore which patients may be
CC   in need of restorative therapy. The present sequence is human PKIN-9
CC   protein.

PT leukemia or lymphoma) -
XX
PS Claim 67; Page 171-173; 218pp; English.
XX
CC The present invention relates to human kinases (PKIN) and polynucleotides
CC encoding such proteins. PKIN sequences of the invention are useful for
CC diagnosing, treating or preventing disorders associated with aberrant
CC expression of PKIN, particularly immune system disorders (e.g. acquired
CC immune deficiency syndrome (AIDS), thymic hypoplasia, Crohn's disease,
CC anaemia, asthma), neurological disorders (e.g. epilepsy, Charcot-Marie-
CC Tooth disease or seizures), cell proliferative disorders (e.g. cancers
CC such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma),
CC and developmental disorders (e.g. Down's syndrome). They are also used
CC in gene therapy and protein therapy. The present sequence is human
CC PKIN-12 protein.

PT Diagnosing cancer, comprises determining the upregulation of expression
PT of a nucleic acid sequence encoding a protein kinase or upregulation of
PT expression of the protein kinase, in the cancer -
XX
PS Claim 1; Page 60-62; 87pp; English.
XX
CC The invention relates to a method for screening biologically active agent
CC that modulates cancer associated protein kinase function. The invention
CC also relates to a method for diagnosing cancer comprising determining the
CC upregulation of expression of a nucleic acid sequence encoding a protein
CC kinase. The method is useful for diagnosing cancer. A protein kinase is
CC useful for screening biological agents that modulate cancer associated
CC protein kinase function. Downregulating the activity of protein kinase is
CC useful for inhibiting the growth of a cancer cell, e.g. liver or colon
CC cancer. A nucleic acid encoding protein kinase is useful to screen biopsy
CC derived tumours and inflammatory samples such as arthritic synovium, for
CC amplified DNA in the cell or increased expression of corresponding mRNA
CC or protein and is also useful to detect differences in expression levels
CC such as molecular weight, amino acid and nucleotide sequences between the
CC two cells. The present sequence is human mitogen activated protein
CC kinase, MAP3K11.

PT   disorders -
XX
PS   Claim 20; SEQ ID NO 19419; 1399pp + Sequence Listing; English.
XX
CC   The invention relates to human polynucleotides (AAI79941-AAI93841) and
CC   the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to
CC   cytokine, cell proliferation or cell differentiation or which may induce
CC   production of other cytokines in other cell populations. The
CC   polynucleotides and polypeptides are useful in gene therapy, vaccines or
CC   peptide therapy. The polypeptides have various cytokine-like activities,
CC   e.g. stem cell growth factor activity, haematopoiesis regulating
CC   activity, tissue growth factor activity, immunomodulatory activity and
CC   activin/inhibin activity and may be useful in the diagnosis and/or
CC   treatment of cancer, leukaemia, nervous system disorders, arthritis and
CC   inflammation.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Human leucine-zipper protein kinase - useful for treating tumours of
PT   the central nervous system
XX
PS   Claim 3; Fig 1; 19pp; English.
XX
CC   This sequence represents a novel human leucine-zipper protein kinase
CC   isolated from brain tissue. The specification states that the
CC   protein contains an ATP-binding site at position 537-544 (consensus
CC   sequence Gly-Xaa-Gly-Xaa-Xaa-Gly), a protein kinase domain at position
CC   231-243 and a putative endoplasmic reticulum (ER) targeting sequence at
CC   position 413-418 (consensus sequence REEL). This protein is most similar
CC   to members of serine/threonine protein kinases and is believed to be a
CC   "non-receptor type kinase" based on its lack of a transmembrane domain.
CC   Probes to this protein could be used for diagnostic or research purposes
CC   to detect or quantitate the expression of leucine-zipper protein kinase.
CC   Overexpression of leucine zipper protein kinase can result in
CC   hyperproliferation of cells and metastasis. The application of exogenous
CC   leucine-zipper protein kinase may interfere with specific protein-protein
CC   or protein-nucleic acid interactions involved in hyperproliferation. This
CC   may be used to treat animals suffering from tumours of the central
CC   nervous system by inhibiting the overexpression of leucine-zipper protein
CC   kinase in vivo or by interfering with a vital signal in the chain of
CC   signals leading to tumourigenicity.

PT   Examining the ischemic condition (e.g. occlusive ischemia) by measuring
PT   expression levels of particular genes defined in the specification or
PT   by determining the expression profile of a gene group comprising these
PT   genes -
XX
PS   Claim 2; Page 244-248; 2690pp; English.
XX
CC   The present invention describes a method for examining ischaemic
CC   conditions, comprising measuring the expression levels of particular
CC   genes (I) in a test sample or determining the expression profile of a
CC   gene group in the sample comprising genes selected from (I). The method
CC   is useful for examining the ischaemic condition (e.g. compressive
CC   ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring
CC   expression levels of particular genes (ABI99202 to ABI99912, encoding
CC   the protein sequences in ABB57020 to ABB57374) or by determining the
CC   expression profile of a gene group comprising these genes. The
CC   expression levels or expression profiles produced by these genes are
CC   used as an indicator when screening for ischaemic condition-improving
CC   drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914
CC   represent PCR primers for a mouse ischaemic condition related sequence,
CC   which are used in the exemplification of the present invention.
